

# Replication of Intranet on 2 Servers.

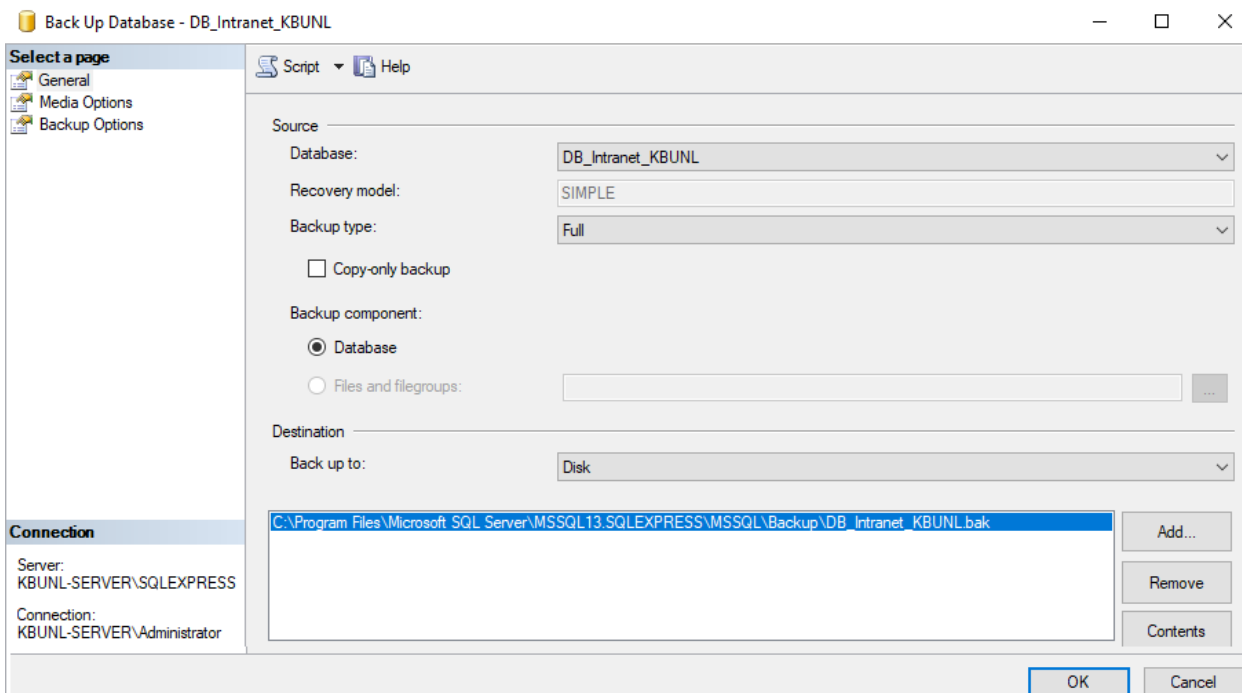

Complete these two Steps for Synchronising 10.1.168.1 and 10.1.169.1

## 1. Taking Backup of Database

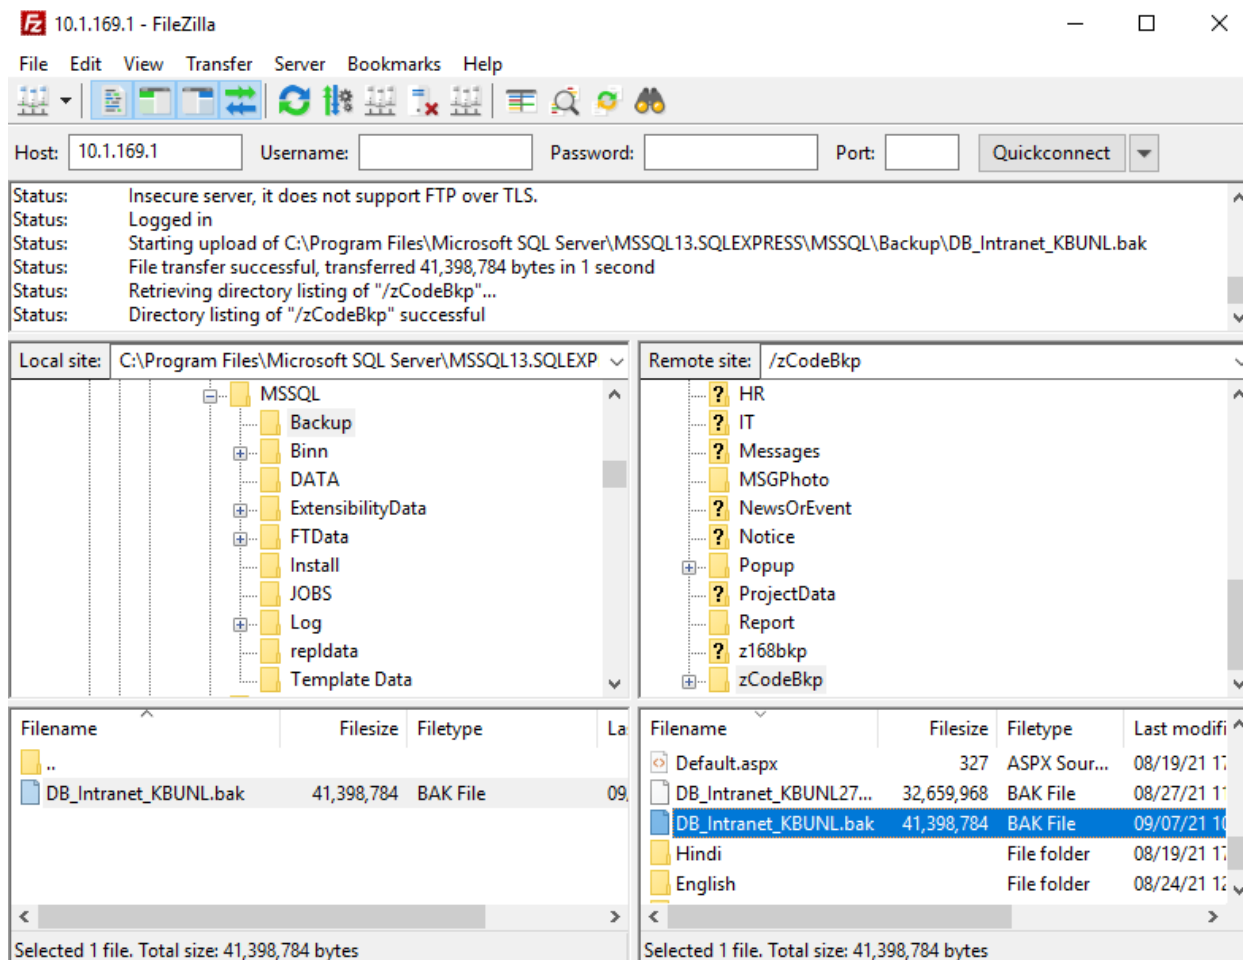

Open SQL Management Studio and take backup of Main Intranet Server

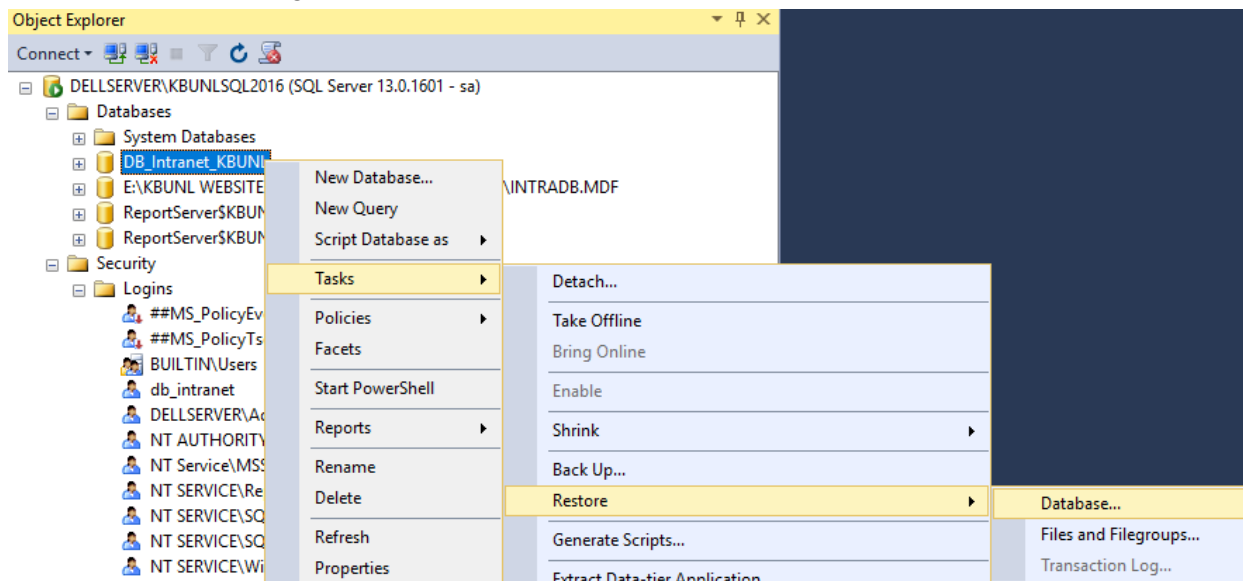

Press OK

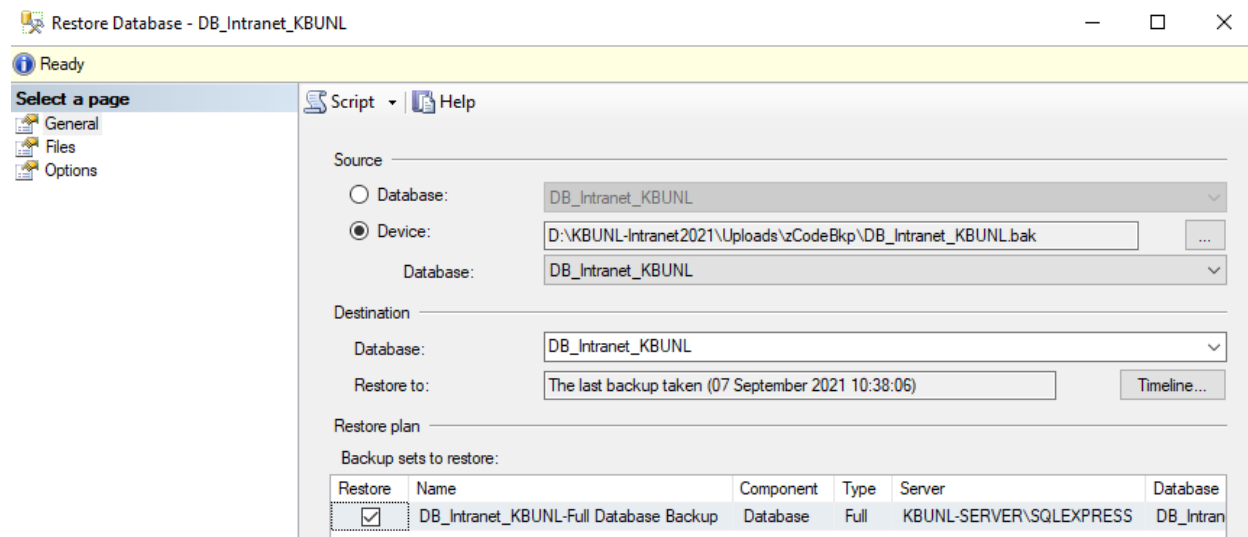

Copy this .bak file to Backup server using FileZilla FTP or RDP.

Now Open SQL Management Studio in Backup Server and restore the database.

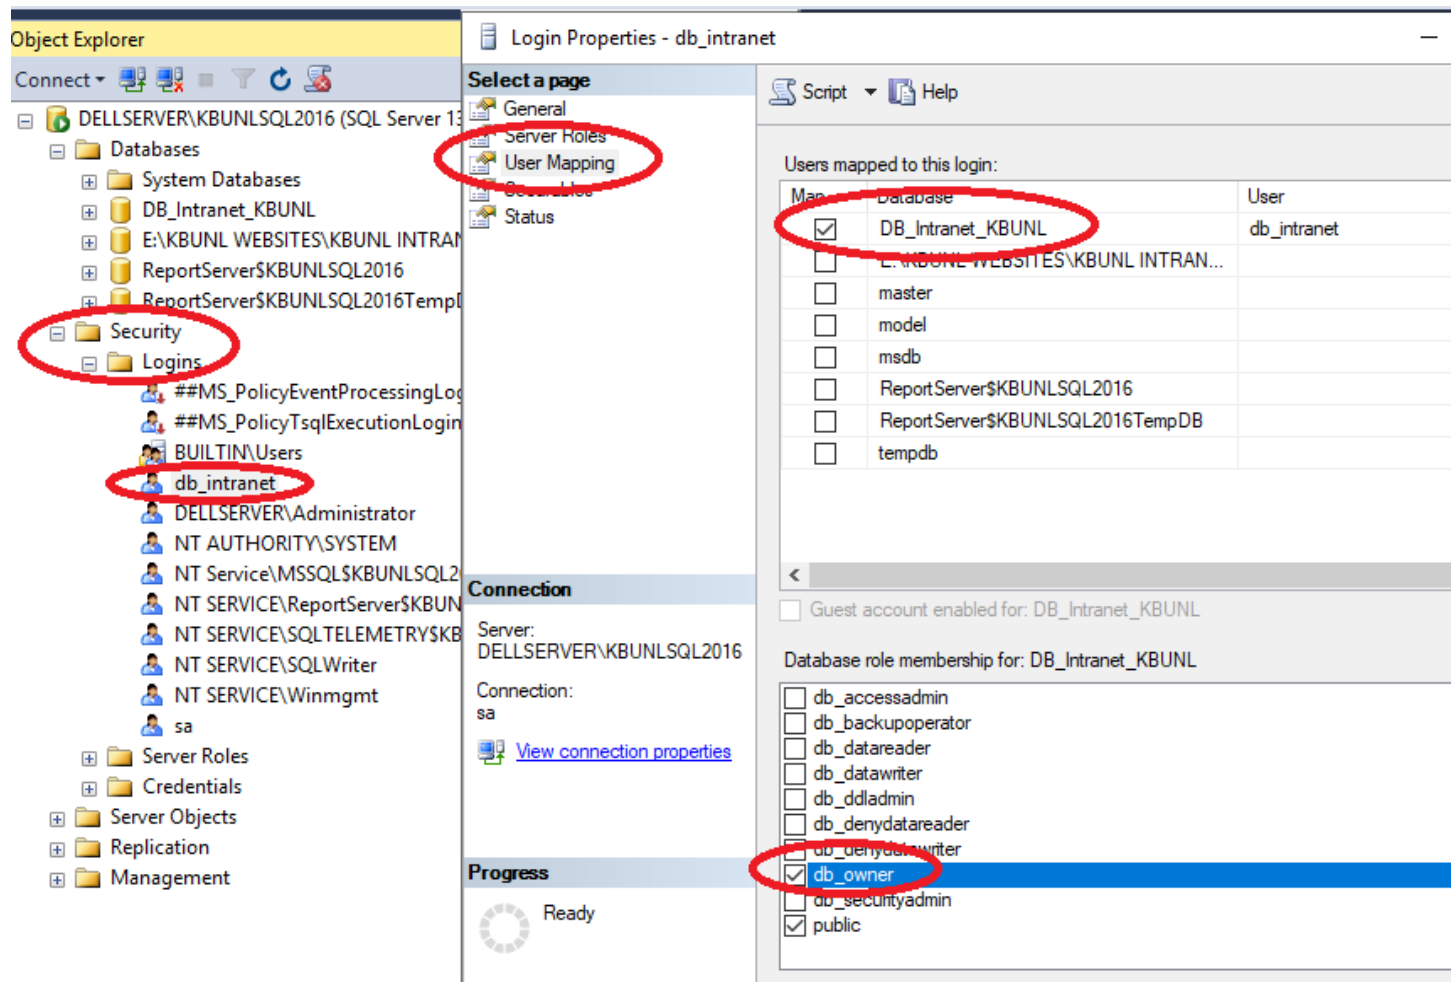

Choose the .bak file path in the device and click OK

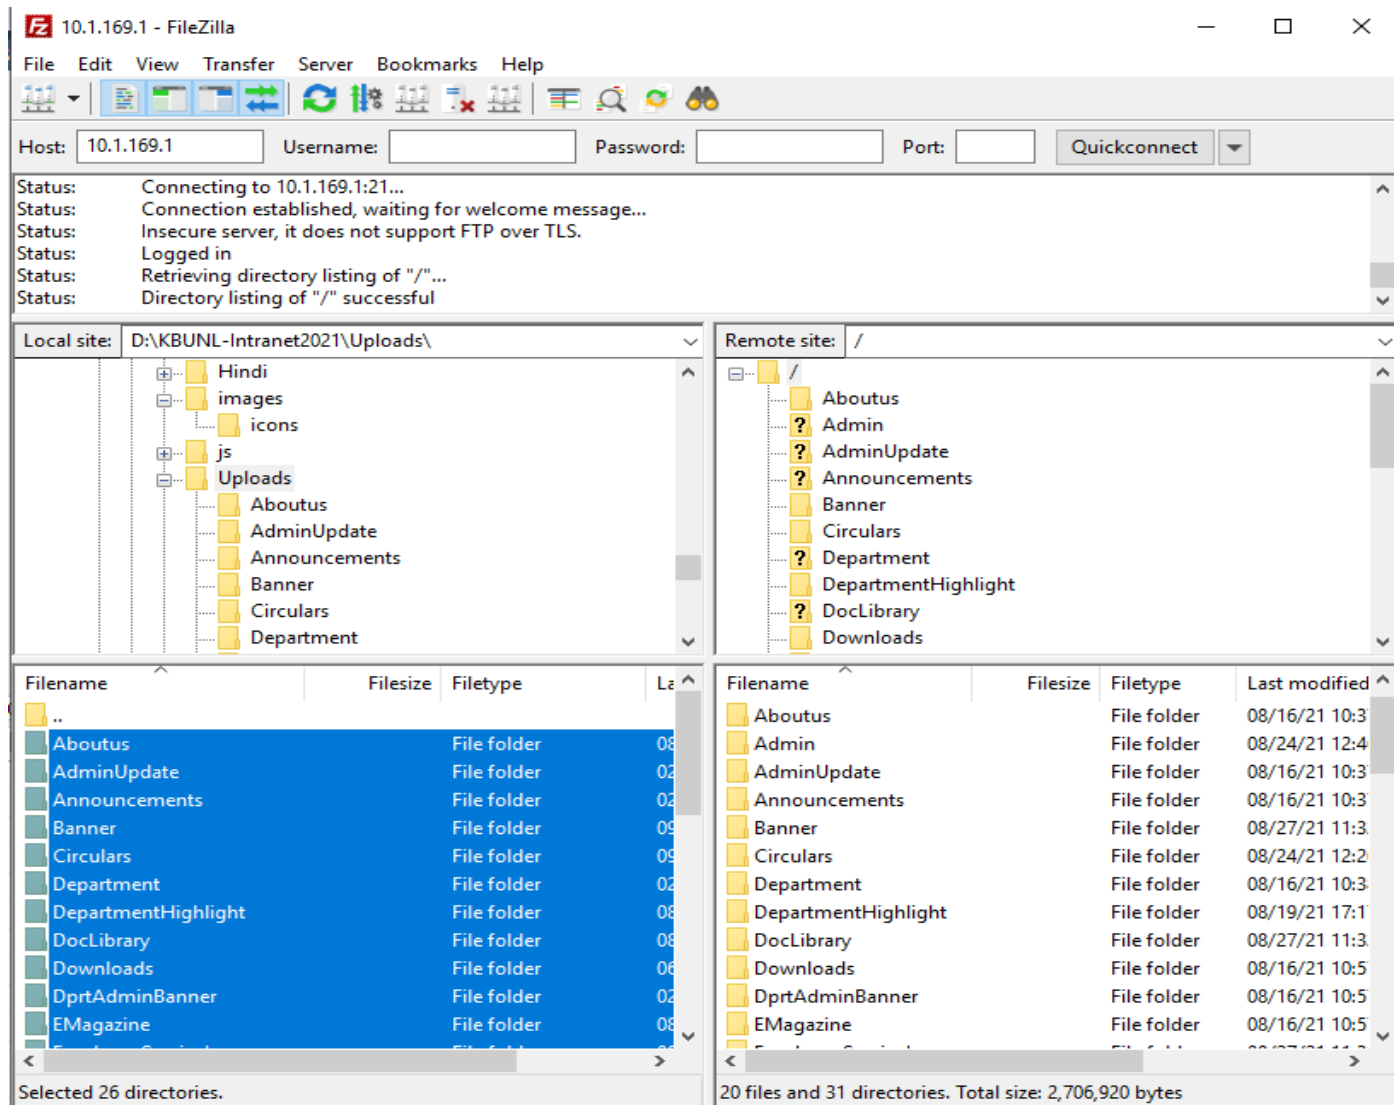

(If some error related to database in use comes then try to switch sql server on/off or make database offline)

Restore the user authorization as shown:

## 2. Taking Backup of Intranet upload files

Open filezilla in main server and copy all data from upload folder to backup server using ftp
